Location	London, UK

PERSONAL SUMMARY

A dynamic, highly articulate and detail-oriented individual, holding a strong passion for mathematics, technology, and problem solving. Recently graduated in Computer Science (First Class Honours) with a specialism towards AI, with an adept passion for using skills to provide solutions to complex and non-trivial problems.

SKILLS SUMMARY

- **Java & Spring Boot** – Very strong expertise working with Java modules, libraries and logic across a range of different contexts, in addition to hands-on experience working with Spring Boot throughout university.
- **Python** – Strong expertise working with Python libraries, including machine learning toolkits & frameworks - HuggingFace Transformers, Roboflow, PyTorch and ONNX
- **Ethical Data Handling** – Experience in following ethics procedures when designing systems, including knowledge of GDPR legislation, protecting personal data, and mitigating harm reduction to participants.
- **Methodologies** – Experience in working to full lifecycle development for Agile and Waterfall techniques, individually and as part of a group, including Scrum frameworks within research-led environments simulating industry practice. Experienced in utilising test-driven development.
- **Web Tools** – High skill level in HTML, CSS, JavaScript & PHP, working with Apache and SQL environments.
- **UML & Data Analysis** – Basic knowledge in using SPSS Statistics, Visual Paradigm, RStudio and SQLite acquired through university studies.
- **Artificial Intelligence** – Mathematical knowledge of internal AI system architectures, including neural network structure, heuristic search algorithms and gradient descent. Experienced in working with computer vision frameworks, language model tuning and synthesizing, and image classifiers.
- **Time Management & Creativity** – An unparalleled ability to work under pressure in fast-paced environments through exceptional time management skills; an established creative record as a video producer, musician and hobby coder.

EDUCATION

Brunel University London, Uxbridge

BSc Computer Science (with Artificial Intelligence specialism), September 2021 – July 2024

Grade: (1st) First Class Honours

Year 1 & 2 Modules: Logic and Computation (A-), Fundamental Programming (A+), Software Design (A+), Software Implementation (A+), L1 Software Group Project (A-), Networks and Operating Systems (A), Algorithms and their Applications (A-), Software Development & Management (A), L2 Software Group Project (A). *Specialist (Year 3) Modules:* Artificial Intelligence (A), Digital Media & Games (A-), Human-Computer Interaction (B+), Advanced Topics in Computer Science (A-).

Westcliff High School for Boys Grammar School, Westcliff-on-Sea, Essex

Secondary and Sixth Form, September 2014 – June 2021

3 A-Levels in Computer Science (A), Mathematics (C), and Physics (C)

11 GCSEs from Grades 8-6, including GCSE Computer Science (Grade 8)

PROJECT WORK

Year 3 Undergraduate Individual Project: Deep Learning-Powered Hazard Detection for Visually Impaired Rail Passengers

- An award-winning undergraduate AI project involving the creation of an artificial intelligence-based system designed to detect platform edges and tracks at railway stations, converting this information into an audio-based format for individuals with a visual impairment. *This project was the winner of Brunel's Software Innovation Head of Department Prize/Sponsorship, 2024.*
- Recruited participants and followed university ethics procedures to ensure GDPR compliance, ethical safety and harm reduction during participant-based testing.

- Analysed results to create extensive insight into future research, potential problems with the technology, and expanding project scope.
- Conducted extensive background reading into similar technologies, including those used in automotive vehicle technology.

Year 2 Undergraduate Group Project

- Involved the analysis, design and implementation of a software solution for a web-based crime reporting application. Gained experience building web APIs with React, Spring Boot and MySQL servers.
- Responsible for project version control, including git repository management, fixing merge conflicts and maintaining the repository to an acceptable standard for assignment submission.
- Responsible for sprint management – investigated and utilised user requirement to create a list of task objectives for the software, following this up with summary reports of objectives met and objectives not met, along with explanations, risk mitigations and possible improvements.
- Performed extensive software testing and implementation of error handling, utilising a TDD approach, creating a range of test scenarios for data access levels and error handling.
- Gained experience in writing documentation via summary reports, including the use of diagrams and researching of existing successful software. Developed skills in project leadership, managing and coordinating group discussion, providing support, maintaining professional integrity and teamworking as well as practical skills in debugging code, satisfying user requirements, meeting deadlines and testing software.

RELEVANT WORK EXPERIENCE

Shadowing, NELFT NHS Information Technology Department

- 1 week shadowing in the NHS within the North East London Foundation Trust (NELFT) Technology Department, developing insight into the work environment within IT Support and Research, a field I wish to pursue.
- Developed basic knowledge of server-side applications such as Microsoft SCCM and electronic patient record systems, as well as technical skills in disassembling and reassembling company equipment such as PCs and server mainframes, ensuring physical connections are secure and functional.
- Developed problem-solving skills through shadowing IT helpdesk queries and the application of acquired knowledge into real-world scenarios.

OTHER WORK EXPERIENCE

Bar Associate, JD Wetherspoon PLC, September 2021 - Present

- Worked at large central London establishments for almost 3 years as a front-of-house associate.
- Developed skills in mitigating difficult interactions and ensuring compliance with safety policies and the law, personal communication through relaying information to staff and customers, and skills in team collaboration and leadership within a fast-paced and busy environment.

PERSONAL ACHIEVEMENTS

Brunel Software Innovation: Head of Department Prize, March 2024

Awarded a first place prize and a £300 research sponsorship showcasing the workings of my Year 3 Undergraduate project to industry sponsors, university faculty and students. Recruited participants to test the software being developed in order to highlight potential improvements and analyse a wide range of smartphone hardware for compatibility.

International Music Touring & Performances, New York, July 2019

Performed as part of an orchestral ensemble across prestigious locations in New York City for one week as a keyboard player. Collaborated with a team of student music technicians and ensemble members to deliver performances in locations including the United Nations building foyer, and the open grounds of Central Park. Gained experience maintaining a high standard of conduct and professionalism as was required during the performances.

Sound Engineer, Brunel University, September 2022 - Present

Worked as a paid sound engineer and DJ for Brunel University. Developed people skills and learned to read a crowd effectively, honing my abilities to working under pressure to meet strict demands for quality and experience.
